FFT anisotropy (published metric): 1000 real vs 1000 generated clips
True positive rate (generated clips found)
False positive rate (real clips called Generated)

t = 0.048
CI: bootstrap over scenarios (2000 resamples)
original files (real mpeg4 10 fps, generated h264 24 fps)
AUC = 0.881, 95 % CI [0.864, 0.897]
same clips re-encoded to one container (h264, 1280×704, 10 fps)
AUC = 0.784, 95 % CI [0.762, 0.806]
