
(a) Red light: the recorded ego stops at the stop bar, the edited one drives through
window end
window start
along-track (m)
lateral offset from the crossing point (m)
speed (m/s)
crossed at t = 5.6 s, min speed in the last 10 m = 3.8 m/s
speed (m/s)
distance to the wait line (m), ego travels right to left
(b) Stop sign: the recorded ego stops at the stop bar, the edited one rolls through
window end
window start
along-track (m)
lateral offset from the crossing point (m)
speed (m/s)
crossed at t = 6.0 s, min speed in the last 10 m = 16.1 m/s
speed (m/s)
distance to the wait line (m), ego travels right to left
recorded ego trajectory
hand-edited trajectory (colour = speed)
controlled wait line (stop bar)
traffic light
stop sign
crossing point
ends of the rendered 121-frame window
